8	Wrap-up and Oral Exam		10:45-12:15am

Course Syllabus

Associate Professor : Mariko Inoue

Course	Universal Health Coverage & Aging Society
<p>Course Overview</p> <p>Universal Health Coverage (UHC) is an important element of the global health agenda in ensuring that all people obtain necessary health services without financial hardship. Moreover, ageing of the population is a continuing problem around the world regardless of the each individual country's level of development. This means that UHC must be achieved in a world facing both demographic and epidemiological transitions. With regard to discussions on UHC in ageing societies, a simple focus on the elderly population is insufficient. We need a grand social design to promote the reforms necessary to overcome changes related to the ageing population. A wide range of public health skills and knowledge is required to support a cross-spectral approach to achieving UHC through a better understanding of good practices.</p> <p>The purpose of this course is to provide students with an understanding of the global health agenda in terms of Universal Health Coverage, particularly in an ageing society. Japan is one of the countries experiencing a rapid growth in the elderly population. Through a combination of in-class lectures, discussions, and site visits, we would like to use the situation in Japan as a case study of how UHC can be achieved in an ageing society.</p>	
<p>Objective of the course</p> <p>This course is designed to meet the following GIOs and SBOs.</p> <ul style="list-style-type: none"> ◆General Instructive Objectives (GIOs) <ol style="list-style-type: none"> (1) To understand the current state of UHC and population ageing in Japan and around the world (2) To identify the stakeholders and their role in achieving UHC (3) To develop effective strategies for achieving UHC in an ageing society ◆Specific Behavioral Objectives (SBOs): Participants can <ol style="list-style-type: none"> (1) Describe the background and trends to setting the global agenda on UHC (2) Understand the statistical data related to demographic and epidemiological transitions. (3) Define and provide an overview of UHC in Japan and around the world. (4) Perform stakeholder analysis and explain each stakeholder's role in achieving UHC, particularly in a local setting. (5) Understand the policies and projects related to UHC in Japan from multiple perspectives, such as the health insurance system, health human resources, health financing, regulation, social welfare, community development, and other relevant areas. (6) Develop effective alternative strategies for achieving UHC in an ageing society in their own region or countries. 	
<p>Textbook</p> <p>Reading materials will be announced for registered participants.</p>	
<p>Recommended readings</p> <ol style="list-style-type: none"> (1) World Health Organization. World Health Report 2010: Health system financing: the path to universal coverage (2) World Health Organization. <i>World report on ageing and health</i>. Geneva: WHO; 2015 (3) WHO/World Bank Joint report. Tracking universal health coverage: 2017 global monitoring report. 	

Class Schedule

1	Introduction Lecture 1. Universal Health Coverage (UHC) and ageing as a global agenda	Monday, July 22, 2019	1:30–2:30 pm
2	Lecture 2. Japanese Health System (1) National Health Insurance System		2:45–4:15 pm
3	Lecture 3. Japanese Health System (2) Japanese public health system as a historical perspective of UHC in Japan	Tuesday, July 23, 2019	9:00–10:30 am
